Historical cross-trial replay and current inferential eligibility

Membership is version-specific

a

Historical units are clustered

10 HER2
TRIO–CHER-LOB

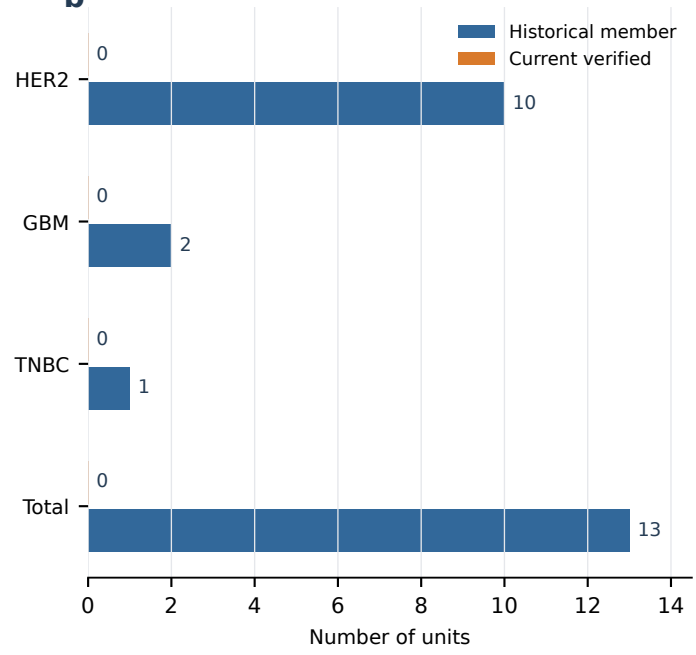
2 GBM
AVAglio–GLARIUS

1 TNBC
IGG14–BrighTNess

13 units in 3 dependency clusters; not 13 independent replications

b

Current strict proportion: NOT ESTIMABLE



c

Supporting sensitivity results retain their inferential boundaries

Absolute-effect sensitivity

23 models

1 nominal

0 multiplicity-robust

Stromal_FARMER: q=0.416; does not promote replication

TRIO aggregate compatibility

possible randomized Arm 3 n = 30–38

raw pCR proportion = 48.5–60.0%

Conditional integer range only
Not a confidence interval or interaction bound
