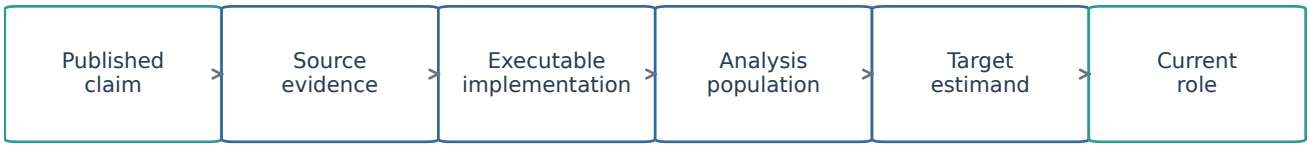
Finite study boundary and complementary correction pathways

a

28	22	15	27
historical candidates	claim–estimand objects	local-numeric objects	historical model rows
lineage only	core audit unit	potential reanalysis	dependent rows

Distinct counting units; not a PRISMA flow or prevalence denominator

b



Each dimension is retained separately; no composite readiness score

c

Case	Source finding	Permitted action	Current role
TRIO-US B07	Arm 3 participant phase is not recoverable from public rows	Preserve historical estimates; no pseudo-corrected interaction	Historical/exploratory computation; not verified randomized interaction
AVAglio	Source rules recover 349 → 339 → 333 analysis sets	Separate population restriction from covariate adjustment	Same-trial model-specification sensitivity
