a Trial design and public expression subset
Lead-in: first 20 directly assigned to Arm 3 (nonrandomized)
Subsequent randomized phase
Arm 1 / Arm 2 / Arm 3
published/public subset
Public baseline expression: n=110
Arm 1: 31 (15 pCR) Arm 2: 29 (7 pCR)
Arm 3: 50 (25 pCR); phase field absent
b Conditional aggregate compatibility
Compatible randomized-stage pCR (%)

38
Randomized participants among 50 public Arm-3 rows
c Inferential eligibility
Arm 1
randomized by design
Arm 2
randomized by design
Arm 3
mixed phase; membership unresolved
Historical Arm 1 vs 3
not a pure randomized comparison
No patient-level phase labels were inferred.
