RT_01 RSI GARD10	U2	mixed	D8	AG only	PO	E9	reframed
BCI_01 BCI HI2	U2	positive	D9	PA only	NR	E10	limited

Use: U1, treated-condition association; U2, differential treatment effect. Polarity applies to the source question, not a validation verdict.

Provenance: AS, author-score reuse; LS, local source-compatible score; DL, deposited labels; GM, gene mean; AG, aggregate only; PA, partial assay.

D1 treated/mixed cohort; D2 retrospective randomized; D3 adaptive-platform biomarker analysis; D4 exploratory randomized/subgroup study;

D5* conflicting historical interaction design; D6 treated-arm response; D7 adjusted randomized; D8 pooled controlled; D9 nested randomized.

Population: TU, TRIO phase unverified; CR, CHER randomized context; R, trial context; AR, adaptive source; AG, aggregate; PO, pooled; NR, nested.

Estimand: E1 U1/U2 mismatch; E2 aligned but dependent evaluation; E3 source-cohort association; E4 continuous/binary mismatch;

E5 formal interaction not located; E6 exploratory subgroup; E7 source audit; E8 AVA aligned / GLARIUS medium transportability;

E9 pooled endpoint-specific interaction, not strategy utility; E10 source interaction positive / local assay not executable.

*RCC_04: positive U1 located; standalone Immuno26 U2 not located in reviewed material. Historical design conflict remains recorded.

CHER final score-generation chain remains incompletely recovered. Historical fidelity grades are retained in Table 1, not reassigned here.

All 22 objects shown once. Full original fields, code definitions and 27 local contexts accompany the figure. No composite score.
