
Circle: logistic interaction OR; diamond: Cox interaction HR. Ratios compare treatment effects, not subgroup outcome ratios.
Binary marker direction: higher frozen score (one historical pooled SD); GBM marker=1: deposited proneural label.
T1/T0: TRIO and CHER, trastuzumab+lapatinib / trastuzumab; Bright IGG14, carboplatin+paclitaxel / paclitaxel;
Bright CIN70, veliparib+carboplatin+paclitaxel / paclitaxel; DOP, durvalumab+olaparib+paclitaxel / FFPE paclitaxel control;
AVAglio, bevacizumab / placebo with common RT/TMZ; GLARIUS, bevacizumab+irinotecan / TMZ with shared radiotherapy.
All 27 historical rows retained; historical labels do not establish current strict replication. DOP is not exclusively TNBC.
